## Wednesday Challenge Form

Group Members: The Megagroup

**Problem Statement:** We must make a right triangle with as close to a perfect 90 degree angle as possible. We must use the Pythagoreum Theorum. The materials we will use is straws and tape.

**Approach:** We just kinda taped straws together into a right triangle.

**Solution:** We just barely got in front of last place.

**Lessons Learned:** “Strength in numbers” isn’t true in all cases.
